# ACADEMIC REGULATIONS & CURRICULUM

Applicable to the students admitted from the Academic Year 2024-25 Onwards

## Artificial Intelligence and Machine Learning B. Tech. Program

# MAHARAJ VIJAYARAM GAJAPATHI RAJ COLLEGE OF ENGINEERING (Autonomous)

(Approved by AICTE, New Delhi, and permanently affiliated to JNTUGV, Vizianagaram, Listed u/s 2(f) & 12(B) of UGC Act 1956) Vijayaram Nagar Campus, Chintalavalasa, Vizianagaram-535005, Andhra Pradesh.

#### The visionaries

Late Dr. P V G Raju

Raja Saheb of Vizianagaram
Founder Chairman-MANSAS

Ex-Minister for Education and Health, Govt. of AP

Ex Member of Parliament

Late Dr. P. Anand Gajapathi Raju Ex-Chairman-MANSAS Ex-Minister for Education and Health Govt. of AP. Ex-Member of Parliament.

P. Ashok Gajapathi Raju Chairman-MANSAS Ex-Union Minister for Civil Aviation, Govt. of India. Ex-Minister for Finance, Govt. of AP

#### Academic Regulations (R24M) for B. Tech (Regular-Full time)

(Effective for the students admitted into I year from the Academic Year **2024-25** onwards)

#### 1. Award of the Degree

Award of the B.Tech. Degree if he/she fulfils the following:

- (i) Pursues a course of study for not less than four academic years and not more than eight academic years. However, for the students availing Gap year facility this period shall be extended by two years at the most and these two years would in addition to the maximum period permitted for graduation (Eight years).
- (ii) Registers for **160** credits and secures all **160** credits.

#### 2. Award of B.Tech. degree with Honors

- 1. A student will be declared eligible for the award of the B.Tech degree with Honors if he/she fulfills the following:
  - (i) Student secures additional **16** credits fulfilling all the requisites of B.Tech program i.e., **176** credits.
  - (ii) Registering for Honors is optional.
  - (iii) Honors is to be completed simultaneously with B.Tech. program.
- 2. Students, who fail to fulfill all the academic requirements for the award of the degree within eight academic years from the year of their admission, forfeit their seat in B.Tech. course and their admission stands cancelled.

This clause shall be read along with clause 1 (a) (i).

#### 3. Admissions

Admission to the B. Tech Program shall be made subject to the eligibility, qualifications and specialization prescribed by the A.P. State Government/University from time to time. Admissions shall be made either based on the merit rank obtained by the student in the common entrance examination conducted by the A.P. Government/University or any other order approved by the A.P. Government/University, subject to reservations as prescribed by the Government/University from time to time.

#### 4. Program related terms

**Credit**: A unit by which the course work is measured. It determines the number of hours of instruction required per week. One credit is equivalent to one clock hour of teaching (Lecture/Tutorial) or two clock hours of practical work/field work per week.

#### Credit definition:

1 Hr. Lecture (L) per week	1 credit
1 Hr. Tutorial (T) per week	1 credit
1 Hr. Practical (P) per week	0.5 credit
2 Hrs. Practical (Lab) per week	1 credit

- a) **Academic Year**: Two consecutive (one odd + one even) semesters constitute one academic year.
- b) **Choice Based Credit System (CBCS):** The CBCS provides a choice for students to select from the prescribed courses.

#### 5. Semester/Credits:

- i. A semester comprises 90 working days and an academic year is divided into two semesters.
- ii. The summer break term is for eight weeks during which a student has the opportunity to pursue Internship/ apprenticeship/work-based vocational education and training. This is intended to meet the mandatory requirement of a student to carry out 2-credit Community Project and Mini Project modules. This is especially helpful for students who wish to exit after two semesters or four semesters of study.
- iii. Regular courses may also be offered during the summer on a fast-track mode to enable students to do additional courses or complete backlogs in coursework. The student will have the option to repeat the course inclusive of continuous assessment.
- iv. The institution can decide on the courses to be offered in the summer term depending on the availability of faculty and the number of students.

#### 6. Structure of the Undergraduate Program:

All courses offered for the undergraduate program (B.Tech.) are broadly classified as follows:

S. No.	Category	Breakup of Credits (Total 160)	Percentage of total credits
1.	Engineering Major	81	50.625
2.	Extended Open Elective Cluster (EOEC)	29	18.125
3.	Generic Engineering Stream	20	12.5
4.	Ability Enhancement Courses (AEC)	6	3.75
5.	Value Added Courses (VAC)	6	3.75
6.	Skill Enhancement Courses (SEC)	8	5
7.	Projects	10	6.25
	Total	160	100

## 7. Course Classification:

All subjects/courses offered for the undergraduate program in Engineering & Technology (B.Tech. degree programs) are broadly classified as follows:

Course Category	Course Modules	Total Credits
	• 16 Professional Core Theory Mandatory of 3 credits each 16 * 3 credits = 48 credits	
	• 5 Professional Core Elective Theory of 3 credits	
	each 5 * 3 credits = 15 credits	
Professional Core	6 Professional Core Lab of 2 credits each	
	6 * 2 credits = 12 credits	
	<ul> <li>Projects (Mini &amp; Major)(2 + 8) credits = 10 credits</li> </ul>	87
	<ul> <li>Department specific module (SEC) = 2 credits</li> </ul>	
	• M-I and M-II 2 * 3 credits = 6 credits	
	<ul> <li>Physics + Lab (3 + 1) credits = 4 credits</li> </ul>	
Basic Sciences	• Chemistry + Lab (3 + 1)credits = 4 credits	
	Department Specific Math oriented courses	
	2 * 3 credits = 6 credits	20
	• <b>AEC</b> (Language Proficiency = 2 credits; Env.	
	Studies = 2 credits; Community Project = 2 credits)	
Humanities	• <b>VAC</b> (E & HV = 2 credits; Constitutional values/	
	Rights = 2 credits; Health & Wellness = 2 credits)	
	• SEC (Quantitative Problem Solving = 2 credits)	14
	EOEC-Extended Open Elective Cluster	
	6 Theory Mandatory modules. 6 * 3 credits = 18 credits	
	• 1 Theory Elective module. 1 * 3 credits = 3	
	<ul> <li>credits</li> <li>4 Lab/practice modules.</li> <li>4 * 2 credits = 8</li> </ul>	
	credits,	
Engineering	which is an elective cluster where students can	
Sciences/Professional Sciences	choose from multiple clusters which they can opt for as secondary skill with total of <b>29 credits</b> .	
	<ul> <li>Procedural Programming + Lab 3 +1) credits = 4 credits</li> </ul>	
	• Computer Aided Engineering Drawing = 2	
	• Engineering Workshop = 2	
	Office tools & Social Media Etiquette = 2 credits	39
		160
	Optional For Honors (In Professional Core Area as a deep	
Honors	dive into Professional Elective Cluster)	
	4 Modules * 4 credits = 16 credits	16
	4 Year Honors Degree	176

#### 8. Programme Pattern

- i. Total duration of the B. Tech (Regular) Program is four academic years of 8 semesters.
- ii. A semester comprises 90 working days and an academic year is divided into two semesters.
- iii. There will be an Induction Program before the commencement of the First Semester for the newly admitted students in order to provide orientation and acclimatization to the college campus and professional learning environment. Several activities such as physical activity, creative arts, universal human values, literary, proficiency modules, lectures by eminent people, visits to local areas, familiarization to the departments, innovation activities etc., form part of the Induction Program.
- v. Value Added Courses (VAC) like Health & Wellness, Constitutional Rights/Values, Ethics and Human Values are mandatory credit courses for all the undergraduate students.
- vi. Ability Enhancement Courses (AEC) like Language Proficiency, Environmental Studies and Community Project are mandatory credit courses for all the undergraduate students.
- vii. Skill Enhancement Courses (SEC) like Office Tools & Social Media Etiquette, Engineering Workshop, Quantitative Problem Solving Techniques and Departmental Specific Module are mandatory credit courses for all the undergraduate students.
- viii. Undergraduate degree with Honors is offered as an option for the students having good academic record.
- xvi. College shall assign a faculty advisor/mentor after admission to a group of students from same department to provide guidance in courses registration/ career growth / placements / opportunities for higher studies/ GATE/ other competitive exams etc.

#### 9. Evaluation Process

- The performance of a student in each semester shall be evaluated subject wise with a maximum of 100 marks for 3 credit theory subjects, 50 Marks for 2 credit theory courses and 100 marks for practical subjects. Community Project and Mini Project shall be evaluated for 50 marks while Main Project work shall be evaluated for 200 marks.
- A student has to secure not less than 35% of marks in the semester end examination and a minimum of 40% of marks in the sum total of the Continuous Assessment (CA) and Summative Assessment (SA) marks taken together for the theory, practical, design, drawing subject or project etc.

#### **THEORY COUSES**

Assessment Method	Marks
Continuous Assessment (CA)	40
Summative Assessment (SA)	60
Total	100

- i. For theory subject, the distribution shall be 40 marks for Continuous Assessment and 60 marks for the Summative Assessment.
- ii. For practical subject, the distribution shall be 40 marks for Continuous Assessment and 60 marks for the Summative Assessment.

#### a) Continuous Assessment (5- unit/3 Credit courses)

- i. Continuous Assessment, which is evaluated for 40 Marks is divided into 2 parts: Periodic Assessment (PA) examinations for 25 Marks and Teacher Assessment (TA) for 15 Marks. There shall be two Periodic Assessment (PA) examinations each of 25 marks during a semester. The weighted average in 80/20 ratio will be taken for 25 marks. The duration of exam is 90 minutes. The PA question paper contains 3 long answer questions with internal choice. Each Long answer question carries 7 marks. (3 \* 7M = 21 marks). This will be scaled up to 25 marks)
- ii. The first PA examination shall be conducted on Units I & II with either/or type question from each unit and the second PA examination shall be conducted on Units III, IV and V with either/or type question from each unit.
- iii. The Teacher Assessment (TA) for 15 marks shall be based on assignments/projects/presentations /surprise tests/quizzes which the concerned course owner/subject teacher shall design. The TA methodology shall be approved upfront by the Board of Studies and the same shall be informed to the students at the beginning of the semester itself.

The weighted average in 80/20 ratio is calculated in the following manner. For example:

Marks obtained in first PA exam: 25 Marks obtained in second PA exam: 20 Final PA Marks: (25x0.8) + (20x0.2) = 24

If the student is absent for any one PA examination, the final PA semester marks shall be arrived at by considering 80% weightage to the marks secured by the student in the appeared examination and zero to the other. For example:

Marks obtained in first PA: Absent Marks obtained in second PA: 25

Final PA Marks: (25x0.8) + (0x0.2) = 20

Final Continuous Assessment marks shall be evaluated as follows:

CA = Final PA + TA

# b) Summative Assessment - Evaluation Pattern for 5-Unit/3-Credit courses

Summative Assessment examination of 3-credit theory subjects shall have the following pattern:

- The SA will be conducted for 60 Marks (**180 minutes**)
- Question Paper contains two parts: Part A is for 50 Marks and
   Part B is for 10 Marks.
- ➤ **In Part A**, there shall be one question from each of the 5 units (with either/or choice) which will be evaluated for 10 marks each
- ➤ In Part B, there will be 1 question of 10 marks (with either/or choice) that may be a case study or comprehensive examination treating the course as one complete whole.

#### c) Continuous Assessment (5-unit/2 Credit courses)

For a 2-credit theory course, Continuous Assessment is evaluated for 20 Marks and shall only include the Periodic Assessment (PA) examination. There will be no Teacher Assessment component for these courses. There shall be two PA examinations each of 20 marks. The weighted average in 80/20 ratio will be taken for 20 marks. The duration of exam is **90 minutes**. The PA question paper contains 3 long answer questions with internal choice. Each Long answer question carries 6 marks. (3 \* 6M = 18 marks. This will be scaled up to 20 marks)

# d) Summative Assessment – Evaluation Pattern for 5-Unit/2-Credit courses

Summative Assessment examination of 2-credit theory courses shall have the following pattern:

- The Examination will be conducted for 30 Marks (5 \* 6 Marks).
- Question Paper contains 5 questions (with either/or choice), one from each unit.
- The duration of exam is for 120 minutes.

#### **PRACTICAL COURSES**

Assessment Method	Marks
Continuous Assessment (CA)	40
Summative Assessment (SA)	60
Total	100

- a) For practical subjects, there shall be a Continuous Assessment during the semester for 40 marks and Summative Assessment for 60 marks.
- b) The CA shall include 2 components: Day-to-day work evaluated for 25 marks and Pre-Summative Assessment examination evaluated for 15 marks. Day-to-day work in the laboratory shall be evaluated by the concerned laboratory teacher based on the regularity/record/viva and the Pre-Summative Assessment Examination shall be conducted before the end of the semester.
- c) The SA shall be evaluated for 60 marks, conducted by the concerned laboratory teacher and a senior expert in the subject from the same domain.
- d) The Summative Assessment laboratory examination shall be conducted for **120 minutes** and assessment includes:

- Knowledge on Principles/concepts/Procedure: 20 Marks
- Experimental design /work, Results-Interpretation and analysis: 30 marks
- Viva voce: 10 marks.

#### e) Computer Aided Engineering Drawing – Evaluation Pattern

Assessment Method	Marks
Continuous Assessment (CA)	40
Summative Assessment (SA)	60
Total	100

- a) The CA shall include 2 components: Day-to-day work evaluated for 25 marks and Pre-Summative Assessment examination evaluated for 15 marks. Day-to-day work shall be evaluated by the concerned subject teacher based on the reports/submissions prepared in the class. The Pre-Summative Assessment examination pattern shall consist of 3 questions (either/or type) of 5 marks each.
- b) The Summative Assessment examination shall be evaluated for 60 marks, conducted by the concerned teacher and a senior expert in the subject from the same domain.
- c) The question paper shall contain 3 questions (with either/or choice). Each question will be of 20 marks (5 marks for free hand drawing and list of commands and 15 marks for final drawing prepared in AutoCAD). A student shall answer all questions.

# f) Computer Aided Geometric Design and Assembly Lab - Evaluation Pattern

Assessment Method	Marks
Continuous Assessment (CA)	40
Summative Assessment (SA)	60
Total	100

- a) The CA shall include 2 components: Day-to-day work evaluated for 25 marks and Pre-Summative Assessment examination evaluated for 15 marks. Day-to-day work shall be evaluated by the concerned subject teacher based on class reports and submissions. The pre-summative examination question paper consists of two questions: one on modeling & drafting and one on assembly & drafting. Each question carries 5 marks. Student must answer both questions. And the remaining 5 marks are allocated for viva-voce.
- b) The SA examination shall be evaluated for 60 marks, conducted by the concerned teacher and a senior expert in the subject from the same or related department.
- c) The SA examination question paper consists of two questions: one on modeling & drafting and one on assembly & drafting. Each question carries 25 marks (divided into 5 marks for free hand drawing & procedure and 20 marks for final drawings (modeling/assembly/drafting). Student must answer both questions and the remaining 10 marks are allocated for viva-voce.

#### 10. Massive Open Online Courses (MOOCs):

In order to promote the spirit of blended learning, a student is eligible to pursue a maximum of 20% of the credits through MOOCs. A student shall register for the course (minimum of 8 weeks for a 2-credit course, 12 weeks for a 3-credit course and 16 weeks for a 4-credit course as in Honors) offered as self-study through MOOCs with the approval of Chairman, Board of Studies of the concerned Program. The Head of the Department shall appoint one mentor to monitor the students' progression. The student needs to earn a certificate by passing the exam. The student shall be awarded the credits assigned in the curriculum only by submission of the certificate. Examination fee, if any, will be borne by the student. Students who have qualified in the proctored examinations conducted through MOOCs platform can apply for credit equivalence as specified and are exempted from appearing for the CA and EA examinations (for the specified equivalent credit course only) conducted by the institution.

Necessary amendments in rules and regulations regarding adoption of MOOC courses would be proposed from time to time.

#### 11. Academic Bank of Credits (ABC)

The Institution is part of the Academic Bank of Credits (ABC) initiative to promote increased opportunity of mobility for a student (as per NEP 2020). As such,

- i. A student, upon joining the institution, will become part of the ABC.
- ii. All credits earned by the students in the institution as well as through MOOCs will be reflected in his/her account in the ABC
- iii. The student will be able to avail transfer of credits earned from other institutions to his account as per the regulations of UGC/AICTE/JNTUGV declared from time to time.

#### 12. Summer Internships

There will be a summer break of 8 weeks at the end of each academic year to provide opportunity to students to engage in internships with industry/government agencies/NGO etc. These internships are intended to give exposure to the students through Community Projects and Mini Projects. The Community Project shall be carried out during the summer break after Year 2 and the Mini Project shall be carried out during the summer break after Year 3. The Community Project shall be society oriented and shall be completed in collaboration with government organizations/NGOs & others. The other internship at the end of third year is Industry Internship and shall be completed in collaboration with Industries.

Evaluation of the Community Project and Mini Project shall be through the departmental committee. A student will be required to submit a report to the concerned department and appear for an oral presentation before the departmental committee comprising of Head of the Department, supervisor of the project and a senior faculty member of the department.

A certificate of successful completion of internship from industry/NGO may be included in the report. The report and the oral presentation shall be evaluated for 50 marks as a Summative Assessment. There shall be no Continuous Assessment marks for these projects. A student shall secure minimum 40% of marks for successful completion. In case, if a student fails, he/she shall reappear as and when semester supplementary examinations are conducted by the Institution.

#### **Main Project Work:**

The 4<sup>th</sup> Year of study comprises only self-study courses giving opportunity to students to spend one full year as an intern at various organisations (government/private) in pursuance of his/her career aspiration. The student is also expected to complete the Main Project during this period. At the end of the year, the candidate shall submit the main project report and may also include a certificate of internship.

The project report shall be evaluated with an external examiner. The total marks for project work is **200 marks** and the distribution shall be **80 marks** for continuous assessment and **120 marks** for summative assessment. The supervisor assesses the student for 40 marks (Report: 20 marks, Seminar: 20 marks). At the end of the semester, all projects shall be showcased at the department for the benefit of all students and staff and the same is to be evaluated by the departmental Project Review Committee consisting of supervisor, a senior faculty and HOD for 40 marks. The external evaluation of Project Work is a Viva-Voce Examination conducted in the presence of internal examiner and external examiner and is evaluated for 120 marks.

The college shall facilitate and monitor the student main project/internship programs. Completion of the main project is mandatory. If any student fails to complete the main project, he/she will not be eligible for the award of degree. In such cases, the student shall repeat and complete the main project.

#### 14. Guidelines for offering Honors

The objective of introducing B.Tech.(Honors) is to facilitate the students to choose additionally the specialized courses of their choice and build their competence in a specialized area in the UG level. The program is a best choice for academically excellent students having good academic record and interest towards higher studies and research.

- i. Honors is introduced in the curriculum of all B. Tech. programs offering a major degree and is applicable to all B.Tech (Regular and Lateral Entry) students admitted in Engineering & Technology.
- ii. A student shall earn additional 16 credits for award of B.Tech.(Honors) degree from same branch/department/discipline registered for major degree. This is in addition to the credits essential for obtaining the Undergraduate degree in Major Discipline.
- iii. A student is permitted to register for Honors and is allowed to take maximum of two subjects per semester pertaining to the Honors.

- iv. Separate class work and timetable of the courses offered under Honors program shall be arranged.
- v. Courses that are used to fulfill the student's primary major may not be double counted towards the Honors. Courses with content substantially equivalent to courses in the student's primary Major may not be counted towards the Honors.
- vi. Students can complete the courses offered under Honors either in the college or in online platforms like SWAYAM with a minimum duration of 16 weeks for a 4-credit course satisfying the criteria for credit mobility. If the courses under Honors are offered in conventional mode, then the teaching and evaluation procedure shall be similar to regular B. Tech courses.
- vii. A student registered for Honors shall pass in all subjects that constitute the requirement for the Honors degree program. No class/division (i.e., second class, first class and distinction, etc.) shall be awarded for Honors degree program.
- viii. If a student drops or is terminated from the Honors program, the additional credits so far earned cannot be converted into open or core electives; they will remain extra. However, such students will receive a separate grade sheet mentioning the additional courses completed by them.
- ix. The Honors will be mentioned in the degree certificate as Bachelor of Technology (Honors) in XYZ. For example, B.Tech. (Honors) in Mechanical Engineering.

#### 15. Enrolment into Honors:

- i. Students of a Department/Discipline are eligible to opt for Honors program offered by the same Department/Discipline.
- ii. The enrolment of student into Honors is based on the CGPA obtained in the major degree program. CGPA shall be taken up to VI semester in case of regular and Lateral entry students. Students having 7 CGPA without any backlog subjects will be permitted to register for Honors.
- iii. Transfer of credits from Honors to regular B. Tech degree and viceversa shall not be permitted.
- iv. Honors is to be completed simultaneously with a Major degree program.

#### 16. Registration for Honors:

- The eligible and interested students shall apply through the HOD of his/her parent department. The whole process should be completed within one week before the start of every semester. Selected students shall be permitted to register the courses under Honors.
- ii. The selected students shall submit their willingness to the principal through his/her parent department offering Honors. The parent department shall maintain the record of student pursuing the Honors.

- iii. The students enrolled in the Honors courses will be monitored continuously. An advisor/mentor from parent department shall be assigned to a group of students to monitor the progress.
- iv. There is no fee for registration of subjects for Honors program offered in offline at the respective institutions.

#### 17. Attendance Requirements:

- A student shall be eligible to appear for the external examinations if he/she acquires a minimum 75% of attendance in aggregate of all the subjects.
- ii. Condonation of shortage of attendance in aggregate up to 10% (65% and above and below 75%) in each semester may be granted.
- iii. Students whose shortage of attendance is not condoned in any semester are not eligible to take their end examination of that class and their registration shall stand cancelled.
- iv. A student will not be promoted to the next semester unless he satisfies the attendance requirements of the present semester. They may seek readmission for that semester from the date of commencement of class work.
- v. If the learning is carried out in blended mode (both offline & online), then the total attendance of the student shall be calculated considering the offline and online attendance of the student.
- vi. Given the extensive scope for learning in blended mode, a student can seek consideration of time spent online or on course projects in lieu of attendance. The college academic committee will arbiter engagement of students on a case-to-case basis where a student falls short of the requisite attendance.
- vii. For induction program attendance shall be maintained as per AICTE norms.
- **18. Promotion Rules:** The following academic requirements must be satisfied in addition to the attendance requirements.
  - i. A student shall be promoted from first year to second year if he/she fulfills the minimum attendance requirement as per university norms.
  - ii. A student will be promoted from II to III year if he/she fulfills the academic requirement of securing 40% of the credits (any decimal fraction should be rounded off to lower digit) in the subjects that have been studied up to either III semester or IV semester from the following examinations irrespective of whether the candidate takes the examination or not.
  - iii. A student shall be promoted from III year to IV year if he/she fulfills the academic requirements of securing 40% of the credits (any decimal fraction should be rounded off to lower digit) in the subjects that have been studied up to either V semester or VI semester from the following examinations irrespective of whether the candidate takes the examination or not.

- iv. And in case, a student is detained for want of credits for a particular academic year by ii) & iii) above, the student may make up the credits through supplementary examinations and only after securing the required credits he/she shall be permitted to join in the III year (V sem) or IV year (VII sem) respectively as the case may be.
- v. When a student is detained due to lack of credits/shortage of attendance he/she may be re-admitted when the semester is offered after fulfillment of academic regulations. In such case, he/she shall be in the academic regulations into which he/she is readmitted.

#### 19. Grading:

As a measure of the student's performance, a 10-point Absolute Grading System using the following Letter Grades and corresponding percentage of marks shall be followed:

After each course is evaluated for 100 marks, the marks obtained in each course will be converted to a corresponding letter grade as given below, depending on the range in which the marks obtained by the student fall.

#### Structure of Grading of Academic Performance

Range in which the marks in the subject fall	Grade letter	Grade points
≥ 90	A+ (Outstanding)	10
≥ 80 and < 90	A (Excellent)	9
≥ 70 and < 80	B (Very Good)	8
≥ 60 and < 70	C (Good)	7
≥ 50 and < 60	D (Average)	6
≥ 40 and < 50	E (Pass)	5
< 40	F (Fail)	0
Absent	Ab (Absent)	0

A student obtaining Grade "F" or Grade "Ab" in a subject shall be considered failed and will be required to reappear for that subject when it is offered the next supplementary examination.

# Computation of Semester Grade Point Average (SGPA) and Cumulative Grade Point Average (CGPA):

The Semester Grade Point Average (SGPA) is the ratio of sum of the product of the number of credits with the grade points scored by a student in all the courses taken by a student and the sum of the number of credits of all the courses undergone by a student, i.e.,

SGPA = 
$$\Sigma (C_i \times G_i)/\Sigma C_i$$

where,  $C_i$  is the number of credits of the ith subject and  $G_i$  is the grade point scored by the student in the ith course.

The Cumulative Grade Point Average (CGPA) will be computed in the same manner considering all the courses undergone by a student over all the semesters of a program, i.e.,

CGPA =  $\Sigma$  (C<sub>i</sub> × S<sub>i</sub>)/  $\Sigma$  C<sub>i</sub>

where "Si" is the SGPA of the ith semester and  $C_i$  is the total number of credits up to that semester.

Both SGPA and CGPA shall be rounded off to 2 decimal points and reported in the transcripts.

While computing the SGPA the subjects in which the student is awarded Zero grade points will also be included.

**Grade Point**: It is a numerical weight allotted to each letter grade on a 10-point scale.

**Letter Grade**: It is an index of the performance of students in a said course. Grades are denoted by the letters A<sup>+</sup>, A, B, C, D and F.

#### **Award of Class:**

After a student has satisfied the requirements prescribed for the completion of the program and is eligible for the award of B. Tech. Degree, he/she shall be placed in one of the following four classes:

Class Awarded	CGPA Secured
First Class with Distinction	≥ 7.0 (Without any supplementary appearance)
First Class	≥ 6.0 and < 7.0
Second Class	≥ 5.0 and < 6.0
Pass Class	≥ 4.0 and < 5.0

**Note**: Students who have written supplementary examinations to fulfil the credit requirement will not be awarded First Class with Distinction. For such students the highest degree that is awarded will be First Class Only.

#### CGPA to Percentage conversion Formula = CGPA $\times$ 10

#### 20. With-holding of Results

If the candidate has any dues not paid to the institution or if any case of indiscipline or malpractice is pending against him/her, the result of the candidate shall be withheld in such cases.

#### 21. Multiple Entry / Exit Option

With NEP setting in, the theme is we will need to give different entry-exit options for students and a possibility to tailor a 4-year course or even a 3-year exit degree to suit their interests and requirements.

- Exit-Entry at each year of study through the entire 4-year duration.
- Possible multiple Degree Options with different Credit requirements that provide an option to a student to pick an option that best suits his/her interests and requirements.

 Note: Four Year undergraduate program (FYUP) with or without Honors is the most recommended exit. But if for some unavoidable reasons, a student needs to exit at the end of Year I, Year III, Year III, the following would be the respective exit requirements with a tentative certificate/ diploma/ degree defined.

Year of Exit	Degree	Credits Required to be Earned During Course Work		Total Credits
End of Year I	Office Tools Certificate (Or something equivalent as determined by Affiliating University)	40	6	46
End of Year II	Diploma in Discipline 1 (Or something equivalent as determined by Affiliating University)	88	8	96
-	Bachelor in Vocational Sciences in <b>Discipline1</b> (Or something equivalent as determined by Affiliating University)		0	136
Year IV	Bachelor of Technology in <b>Discipline 1</b> ) (Or something equivalent as determined by Affiliating University)	160	0	160

Year of Exit	Degree	Credits Required to be Earned During Course Work		Total Credits
	Bachelor of Technology with	176	0	176
	Honors in <b>Discipline 1</b> ) (Or something equivalent as determined by Affiliating University)			

**Note:** The exit extra credits at Year II and Year III would essentially come from critical courses as determined by BoS from the following semester.

#### (a) Exit Policy:

The students can choose to exit the four-year program at the end of first/second/third year.

i) UG Certificate in (Field of study/discipline) - Program duration:

First Year (first two semesters) of the undergraduate program, 40 credits followed by an additional exit 6 credit bridge course. The 6 extra credits would be to make the certificate self-sufficient, with one 3-Credit Course on Taxation and one 3-Credit Course on Accounting that would help the candidates acquire job-ready competencies required to enter the workforce.

- ii) **UG Diploma (in Field of study/discipline)** Program duration: First two years (first four semesters) of the undergraduate program, 88 credits followed by an additional exit of 8-credit bridge course with 2 Integrated 4 Credit courses in Major with 3+1 Theory and Lab distribution administrated as a Crash course in 1 month which would help the candidates acquire job-ready competencies required to enter the workforce.
- iii) Bachelor of Science (in Field of study/discipline) i.e., B.Sc. Engineering in (Field of study/discipline)- Program duration: First three years (first six semesters) of the undergraduate program, 120 credits.

#### (b) Entry Policy:

Modalities on multiple-entry by the student into the B.Tech. program will be provided in due course of time.

**Note:** The institution shall resolve any issues that may arise in the implementation of Multiple Entry and Exit policies from time to time and shall review the policies in the light of periodic changes brought by UGC, AICTE, State government and the affiliating university.

#### 22. Transitory Regulations

Discontinued, detained or failed candidates are eligible for readmission as and when the semester is offered after fulfillment of academic regulations. Candidates who have been detained for want of attendance or not fulfilled academic requirements or who have failed after having undergone the course in earlier regulations or have discontinued and wish to continue the course are eligible for admission into the unfinished semester from the date of commencement of class work with the same or equivalent subjects as and when subjects are offered, subject to Section 2 and they will follow the academic regulations into which they are readmitted.

Candidates who are permitted to avail Gap Year shall be eligible for rejoining into the succeeding year of their B.Tech from the date of commencement of class work, subject to Section 2 and they will follow the academic regulations into which they are readmitted.

#### 23. Medium of Instruction:

The medium of instruction of the entire B.Tech undergraduate program in Engineering &Technology (including examinations and project reports) will be in English only.

#### 24. Student Transfers:

Student transfers shall be as per the guidelines issued by the Government of Andhra Pradesh and the University from time to time.

#### 25. General Instructions:

- a. The academic regulations should be read as a whole for purpose of any interpretation.
- b. Malpractices rules-nature and punishments are appended.
- c. Where the words "he", "him", "his", occur in the regulations, they also include "she", "her", "hers", respectively.
- d. In the case of any doubt or ambiguity in the interpretation of the above rules, the decision of the institution is final.
- e. The institution may change or amend the academic regulations or syllabi at any time and the changes or amendments shall be made applicable to all the students on rolls with effect from the dates notified by the institution.
- f. In the case of any doubt or ambiguity in the interpretation of the guidelines given, the decision of the Head of the institution is final.

Expulsion from the examination hall and 7. Leaves the exam hall taking away answer script or intentionally tears of the script or cancellation of performance in any part thereof inside or outside the subject and all the other subjects the examination hall. candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is debarred for two also consecutive semesters from class work and all University examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat. To constitute a committee comprising of Principal, Vice principal, Chief superintendent, Observer, Controller of Examinations and HoD to discuss and initiate the above action. To keep the CC footage of the act as an evidence. To Obtain a statement from student and invigilator and authorized by observer and Chief superintendent. Expulsion from the examination hall and 8. Possess any lethal weapon or firearm in cancellation of the performance in that the examination hall. subject and all other subjects candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred and forfeits the seat. To constitute a committee comprising of Principal, Vice principal, Chief superintendent, Observer, Controller of Examinations and HoD to discuss and initiate the above action with documented proofs To keep the CC footage of the act as an evidence. To obtain a statement from student and invigilator and authorized by observer and Chief superintendent. The candidate shall be handed over to Police and register a case. 9. If a student of the college, who is not a If the student belongs to our college: Expulsion from the examination hall and candidate for the particular examination or any person not connected with the college cancellation of the performance in that indulges in any malpractice or improper subject and all other subjects conduct mentioned in clause 6 to 8. candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester. The candidate is also

debarred and forfeits the seat.

		Person(s) who do not belong to the College will be handed over to police and, a police case will be registered against them.  • To constitute a committee comprising of Principal, Vice principal, Chief superintendent, Observer, Controller of Examinations and HoD to discuss and initiate the above action.  • To keep the CC footage of the act as an evidence.  • To Obtain a statement from student and invigilator and authorized by observer and Chief superintendent.
10	Comes in a drunken condition to the examination hall.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester.  • To keep the CC footage of the act as an evidence(If any).  • To obtain a statement from invigilator and any others as witness authorized by observer and Chief superintendent.
11	Copying detected on the basis of internal evidence, such as, during valuation or during special scrutiny.	Cancellation of the performance in that subject and all other subjects the candidate has appeared including practical examinations and project work of that semester/year examinations.  To Obtain a statement from Valuer / Chief Valuer authorized by Spot Coordinator and Controller of Examinations.

#### **Salient Features**

Ragging within or outside any educational institution is prohibited.

Ragging means doing an act which causes or is likely to cause Insult or Annoyance of Fear or Apprehension or Threat or Intimidation or outrage of modesty or Injury to a student

Teasing, Embarrassing and Humiliation	Imprisonment upto  6 Months	Fine Upto <b>RS. 1,000</b> /
Assaulting or Using Criminal force or Criminalintimidation	1 Year +	<b>Rs. 2,000</b> /
Wrongfully restraining or confining or causing hurt	2 Years +	<b>Rs. 5,000</b> /
Causing grievous hurt, kidnapping or Abducts or rape or committing unnaturaloffence	5 Years +	<b>Rs. 10,000</b> /
Causing death or abetting suicide	10 Months +	Rs. 50,000/

#### In Case of Emergency CALL TOLL FREE NO.: 1800 - 425 - 1288 LET US MAKE MVGR A RAGGING FREE CAMPUS

ABSOLUTELY SAY NO TO RAGGING

- 1. Ragging is prohibited as per Act 26 of A.P. Legislative Assembly, 1997.
- 2. Ragging entails heavy fines and/or imprisonment.
- 3. Ragging invokes suspension and dismissal from the College.
- 4. Outsiders are prohibited from entering the College and Hostel without permission.
- 5. Girl students must be in their hostel rooms by 7.00 p.m.
- 6. All the students must carry their Identity Cards and show them when demanded
- 7. The Principal and the Wardens may visit the Hostels and inspect the rooms any time.

#### ACADEMIC REGULATIONS (R24) FOR B.TECH. (LATERAL ENTRY SCHEME)

(Effective for the students getting admitted into II year through Lateral Entry Scheme from the Academic Year **2024-2025** onwards)

#### 1. Award of the Degree

- (a) Award of the B.Tech. Degree / B.Tech. Degree with a Minor if he/she fulfils th following:
  - (i) Pursues a course of study for not less than three academic years and not more than six academic years. However, for the students availing Gap year facility this period shall be extended by two years at the most and these two years would in addition to the maximum period permitted for graduation (Six years).
  - (ii) Registers for 120 credits and secures all 120 credits.

#### (b) Award of B.Tech. degree with Honors

A student will be declared eligible for the award of the B.Tech. with Honors if he/she fulfils the following:

- (i) Student secures additional 16 credits fulfilling all the requisites of a B.Tech. program i.e., 120 credits.
- (ii) Registering for Honors is optional.
- (iii) Honors is to be completed simultaneously with B.Tech. programme.
- **2.** Students, who fail to fulfil the requirement for the award of the degree within six consecutive academic years from the year of admission, shall forfeit their seat.

#### 3. Minimum Academic Requirements

The following academic requirements have to be satisfied in addition to the requirements mentioned in item no.2

- i. A student shall be deemed to have satisfied the minimum academic requirements and earned the credits allotted to each theory, practical, design, drawing subject or project if he secures not less than 35% of marks in the end examination and a minimum of 40% of marks in the sum total of the mid semester evaluation and end examination taken together.
- ii. A student shall be promoted from III year to IV year if he/she fulfills the academic requirements of securing 40% of the credits (any decimal fraction should be rounded off to lower digit) in the subjects that have been studied up to either V semester or VI semester from the following examinations irrespective of whether the candidate takes the examination or not.
- iii. And in case if student is already detained for want of credits for particular academic year, the student may make up the credits through supplementary exams of the above exams before the commencement of IV year I semester class work of next year.

#### 4. Course Pattern

- i) The entire course of study is three academic years on semester pattern.
- ii) A student eligible to appear for the end examination in a subject but absent at it or has failed in the end examination may appear for that subject at the next supplementary examination offered. iii) When a student is detained due to lack of credits/shortage of attendance the student may be re-admitted when the semester is offered after fulfilment of academic regulations, the student shall be in the academic regulations into which he/she is readmitted.
- **5.** All other regulations as applicable for B. Tech. Four-year degree course (Regular) will hold good for B. Tech. (Lateral Entry Scheme).

#### II SEMESTER

		CHEMISTRY				
		(Common to all Branche	es)			
R24MCHYT001	Total Contact Hours	42 (L)	L	T	P	C
	Pre-requisite	Basics of 10 + 2	3	0	0	3
		Chemistry				

#### **Course Objective**

This course aims to help students

- To gain the comprehensive understanding of polymers and green chemistry
- To gain knowledge in electrochemistry, spectroscopic techniques and molecular machines.
- To get insight on phenomena of material deterioration and develop understanding on control and protective techniques

#### **Course Outcomes**

After completing this course, the students will be able to

- 1 Classify macromolecules as materials such as polymers, rubbers and make use of these materials as good engineering materials with improved properties. (BL 4)
- Apply fundamentals of electrochemistry and electro analytical techniques and judge a suitable storage device for desired engineering applications. (BL 5)
- Choose certain spectroscopic techniques for analysis of compounds and explain the behaviour of materials as molecular switches. (BL 5)
- 4 Classify various types of material deterioration phenomena and identify suitable control and protective techniques. (BL 4)
- 5 Explain the principles of green chemistry and develop understanding on nanomaterials and harnessing of solar energy. (BL 5)
- 6 Choose suitable material, analytical technique for identification, analysis and develop an understanding on material use, protection and energy storage. (BL 6)

#### **SYLLABUS**

# Unit I HIGH POLYMERS 8 hr

Introduction – Stereospecific Polymers; Types of Polymerizations – Co-ordination polymerization - Zieglar – Natta Catalysis – Mechanism; Plastics – Types - Thermoplastics – Thermosets – Differences; Preparation, Properties and Applications of –PVC - Teflon – Bakelite – Nylon; Rubbers – Natural - Synthetic – Vulcanization; Preparation, properties and applications of - BUNA – S, Thiokol rubber; Fiber Reinforced Plastics – Introduction - Types of FRP – Aramids – Kevlar and Nomex; Conducting polymers - Introduction – Classification – Intrinsic and extrinsic – Applications

## Unit II ELECTROCHEMISTRY AND ITS APPLICATIONS 8 hr

Introduction - Electrode Potential - Measurement of electrode potential - Electrochemical series; Expression for electrode potential - Electrochemical cell - EMF of the cell; Storage devices - Classification - Primary - Leclanché cell; Secondary - Solid state battery / Lithiumion battery; Flow Cells - Fuel cells - Hydrogen - Oxygen fuel cell, Methanol - Oxygen fuel cell - Solid Oxide Fuel Cells; pH Metry; Conductometry; Potentiometry - Principle - Applications.

#### Unit III SPECTROSCOPY AND MOLECULAR SWITCHES 8 hr

Introduction to spectroscopy - Electromagnetic radiation; Classification - Absorption and Emission spectroscopy; Laws of Absorption - Derivation of Beer - Lambert's law - Significance; UV - Visible Spectroscopy - 1 - Introduction - Principle; UV - Visible Spectroscopy - 2 - Instrumentation (block diagram) - Applications; Infra - Red Spectroscopy

- 1 – Introduction to Infra - Red Spectroscopy – Principle; Infra – Red Spectroscopy – 2 - Instrumentation (block diagram) – Applications; Molecular switches - NOR and NOT logic gate operators - Characteristics - Rotaxanes and Catenanes as artificial molecular machines.

Unit IV CORROSION 8 hr

Chemical Corrosion – Mechanism - Pilling Bed worth rule; Electrochemical Corrosion - Mechanism - Difference between dry and wet corrosion - Galvanic series; Types of Corrosion - Differential aeration corrosion, galvanic corrosion, pitting corrosion, waterline corrosion and stress corrosion; Factors influencing rate of corrosion - Metal-based factors and Environment based factors; Corrosion control Methods – Proper design, Use of Pure metal, Use of Alloy; Cathodic protection – Sacrificial Anodic protection method – Impressed current cathodic protection method- Use of Inhibitors; Protective coatings - Types - Metal Coatings – Anodic - Galvanizing and Cathodic Coating – Tinning; Passivation and Pourbaix diagram - Pourbaix diagram.

# Unit V CONCEPTS OF GREEN CHEMISTRY, NANO CHEMISTRY AND 8 SOLAR ENERGY hrs

Green Chemistry - Introduction - Principles of Green Chemistry; Applications - Any green two reactions; Nanomaterials - Introduction - Classification; Synthesis of Nano material by Top down and bottom-up approach; CVD Method - Sol gel method - Synthesis of iron oxide nano particles; Carbon nano tubes - Introduction - Classification - Applications; Harnessing of Solar Energy - Construction and Working of PV Cell; Solar collectors - Concentrating.

#### **Course Objective**

Acquaintance with the basic mathematical implication for computer science, applications of mathematics in computer science.

- To understand mathematical arguments using logical connectives and quantifiers and verify the validity of logical flow of arguments using propositional, predicate logic, and truth tables.
- To understand about elementary of combinatorics, the principle of inclusion and exclusion and the pigeonhole principle.
- To expose the students to Binary relations, posets, Hasse diagram, lattice, and discuss various properties of relations.
- To understand Algebraic structures like groups, semigroups, monoids.
- To introduce generating functions and recurrence relations.

#### **Course Outcomes**

After completing this course, the students will be able to

- 1 Apply mathematical logic to solve problems.
- 2 Apply the concepts related to primality, divisibility, and Greatest common divisors.
- 3 Evaluate the problems using set theory and Apply basic counting techniques to solve combinatorial problems.
- 4 Gain the conceptual background needed and analyze the structures of algebraic nature
- 5 Formulate problems and solve recurrence relations.
- Design the problems by using the concepts of discrete mathematical structures to computer science and engineering. (**BL6**)

#### **SYLLABUS**

# Unit I MATHEMATICAL LOGIC & STATEMENT CALCULUS 8 hr

Statements: Simple and Compound statements, Truth Tables, Well Formed Formulas; Tautologies, Equivalence of formulas; Converse, Contrapositive & inverse of an implication, Duality Law, tautological implications; Normal Forms: Principal Disjunctive Normal Forms, Principal Conjunctive Normal Forms; Inference Theory of Statement Calculus: Validity of argument using Truth Tables; Validity of argument using rules of inference; Consistency of premises; Indirect Method of Proof

#### Unit II PREDICATE CALCULUS & NUMBER THEORY 8 hr

**Predicate Calculus:** Predicate calculus: Predicates, statement of functions, variables and quantifiers, predicate formulas; free and bound variables, universe of discourse, valid formulas and equivalences involving quantifiers; rules of inference; theory of inference for predicate calculus;

#### **Number Theory:**

Properties of integers, Division Theorem; Euclidian Algorithm: finding GCD, testing for prime numbers; Fundamental Theorem of Arithmetic, Prime factorization; Modular Arithmetic, Fermats Theorem

#### Unit III COMBINATORICS, SET THEORY, POSETS AND LATTICES 8 hr

Combinatorics: Principles of counting (product and sum rules); Pigeon hole principle and its applications; Principle of Inclusion-Exclusion and its applications; Relations: Binary relation, properties; equivalence relation, composition of relations; partition of a set, equivalence classes; Partial ordering: Partial order relation, partially ordered set (poset), chain; Hasse diagrams, Lattices.

<b>Unit IV</b>	ALGEBRAIC STRUCTURES	8 hr
Algebraic Sy	estems (Structures): Binary operation, algebraic structures such as Ser	ni group,
Monoid; Grou	up, commutative group with suitable examples; properties satisfied by the	algebraic
structures and	I the elements; Special group structures: Sub group and its criteria; Cyclic	c Groups;
Homomorphi	sim of a Groups; Cosets, properties of cosets; order of a group, L	agrange's
theorem		
Unit V	RECURRENCE RELATIONS & GENERATING FUNCTIONS	8 hrs
	Relations: Formation, iterative method of solving recurrence relations	
	and non-homogeneous recurrence relations by characteristic roots	
Generating I	Functions: Generating functions of sequences; calculation of coeffi	cients of
expansions; (	Closed form expression; solving homogeneous and non-homogeneous r	ecurrence
	enerating functions.

SYLLAB		•								
Unit I		INTRODUCTIO	N TO PROGRA	AMMIN	iG		8 hr			
a c	1 1	e, Number Systems (Bi								

Software, hardware, Number Systems (Binary, Hexadecimal, Octal, Decimal); Algorithms, pseudo code; Flowcharts, Program development steps; Structure of c program with example; Tokens, Basic data types; Operators Arithmetic, logical, relational, bitwise; ternary, increment /decrement, special operators, assignment; Built-in Input/output Functions, Expressions, type casting.

# Unit II SELECTION AND CONTROL STATEMENTS 8 hr

Two way selection statements if, if-else with examples; Nested if with examples; Multiway selection statements - switch with examples; Nested switch with examples, else if ladders with examples;

Iterative statements while, do-while with examples; for loop with examples; Nested loops with examples; Un conditional statements; break, continue, goto with examples

# Unit III INTRODUCTION TO ARRAYS AND STRINGS, MODULAR PROGRAMMING THROUGH FUNCTIONS 8 hr

Array Definition, Declaration and accessing of 1D array; Declaration and accessing of integer 2D array; 2D array applications: matrix addition, multiplication; String definition, declaration and accessing of strings with examples;

Function Definition, prototype, declaration and accessing with examples; Parameter passing mechanisms with examples, Scope and Extent of Variables; Storage classes auto, static, Register and extern with examples; Definition of recursion, types of recursion (direct and indirect) Solving problems using recursive approach like finding factorial, Fibonacci series, Towers of Hanoi.

#### Unit IV POINTERS AND DYNAMIC MEMORY ALLOCATION 8 hr

Definition of pointers, declaration, initialization, Pointer arithmetic; Representing 1D array using pointers with examples; Representing 2D arrays using pointers with examples; Pointer to pointer, constant pointers with examples, Pointer to constant variable, void pointer, generic

#### pointer with examples;

Pointers to Functions; Difference between static and dynamic memory allocation, Dynamic memory allocation using built-in functions (malloc (), calloc ()); Dynamic memory allocation using built-in functions (realloc (), free ()); Dangling pointer and unreferenced memory problem

#### Unit V STRUCTURES, UNIONS AND FILE HANDLING 8 hr

Structure definition, declaration, initialization and accessing structure members; Nested structures with examples, arrays of structures; Pointer to structures with examples, Self-Referential structures; Unions, Bitfields, typedef with examples;

Concept of a file and file modes, Formatted I/O; File handling functions; fopen (), fclose (), fscanf (), fprintf (); Random access files handling functions, command line arguments; Text files, Binary files, Differences between text and Binary files, fread (), fwrite ()

` '								
Pre-requisite Basics of 10 + 2 Chemistry 0 0 2	1							
Course Objective								
This course aims to help students								
• To verify the fundamental concepts with experiments								
Course Outcomes								
After completing this course, the students will be able to								
Determine total hardness, dissolved oxygen, strength of acid in a lead a	icid							
battery, using volumetric analysis								
2 Explain conductometric, potentiometric, pH metric titrations and colorime	tric							
determinations.								
3 Explain the synthesis of a polymer, nanomaterials.								
LIST OF EXPERIMENTS								
1 Determination of HCl using sodium carbonate								
2 Determination of Strength of an acid in Pb-Acid battery								
3 Determination of Iron (II) using potassium dichromate.								
4 Determination of Hardness of a groundwater sample.								
5 Determination of Dissolved oxygen in ground water sample.								
6 Potentiometric titration of Fe (II) with potassium dichromate								
7 Condcutometric titration of Strong acid VS Strong base								
8 Condcutometric titration of Weak acid VS strong base								
9 pH metric titration of strong acid and strong base.								
Determination of percentage of Iron in Cement sample by colorimetry								
ADDITIONAL EXPERIMENTS								
1 Preparation of nanomaterials by precipitation method								
2 Preparation of Bakelite								
3 Determination of Cell constant of a conductivity cell.								
ADVANCED DESIGN EXPERIMENTS								
1 Determination of viscosity of polymer solution using survismeter.								
2 Measurement of 10Dq by spectrophotometric method.

LIST OF									
1	Week-1: Introduction to Programming with operators								
	1. Write a C program to print "Hello, World!" and understand the structure of a								
	basic C program.  Write a C program to demonstrate the use of basic I/O statements (printf								
	2. Write a C program to demonstrate the use of basic I/O statements (printf, scanf)								
		te a C program for calc	ulating the	sum of two r	numbers				
2		Expressions and Opera		sulli OI two I	iumocis.				
2	1. Write a C program to finding the maximum of three numbers using conditional								
	operator.								
	2. Write a C Program to convert temperature from Celsius to Fahrenheat and vice								
	vers	versa							
	3. Write a C Program to to calculate simple and compound interest								
3		Selection Statements							
	1. Write a C program to find the largest of three numbers using if-else statements								
	2. Write a program to demonstrate the use of switch-case statements to perform								
	arithmetic operations based on user choice.								
	3. Write a program to demonstrate the use of else-if ladder to grade student								
4	mar								
4	Week-4:	1	sum of the	digita of the	citton nu	mbon			
		<ol> <li>Write a C program to print sum of the digits of the given number.</li> <li>Write a C program to print the Fibonacci series up to n terms using a for loop.</li> </ol>							
		te a C program to print te a C program to check				_	тог тоор.		
		te a C program to enece te a C program to calcu	_	-			e loon.		
5		Nested Loops and bran		.c.i.a. oi a ila		5 a WIIII	- 100p.		
		te a C program to print	_	atterns usin	g nested	loops.			
		te a C program to print			-	-			
		te a C program to demo					ments		
		in loops.							

6	Week 6:	Arrays					
		te a C program to find the sum of all elements in a 1D array.					
		te a C program to read and print the 2D Array elements in a matrix form.					
		te a C program to perform matrix addition using 2D arrays.					
		te a C program to find the transpose of a given matrix.					
7		String Handling					
,		te a program to demonstrate string operations (copy, concatenate, compare,					
		th) using built-in functions.					
		te a C program to count the number of vowels in a string.					
		te a C program to concatenate two strings without using the library					
		etion streat.					
8		Functions					
0		te a program to define and use a function to find the sum of two numbers.					
		te a C program to check the given number is prime or not using a function.					
		nonstrate passing of an array to a C function.					
9		Recursive Functions					
9		te a recursive program to generate Fibonacci series.					
		te a C program to find the GCD of two numbers using a recursive function.					
		e a C Program to find the nCr value for the two positive numbers where raing recursion.					
10		): Pointers & Dynamic Memory Allocation					
10		te a program to demonstrate pointer arithmetic.					
		te a program to use pointers to access elements of an array.					
		1 0					
		te a program to dynamically allocate memory for an array using malloc calloc.					
		te a program to demonstrate the use of realloc and free for dynamic nory allocation.					
11		: Structures & Unions					
11		te a program to define, declare, and access members of a structure.					
		te a program to define, declare, and access members of a structure.					
		te a C program to store and display student information using structures.					
12		2: File Handling					
12		te a program to demonstrate file handling functions (fopen, fclose, fscanf,					
	fprii						
	-	te a program to read and write data to a binary file using fread and fwrite.					
		te a C program to simulate copy command using command line arguments.

R24MMECD001		COMPUTER AIDED ENGINEERING DRAWING (CSE, IT,CSIT,AIML,DS,ICB)							
		Total Contact Hours	14(T)+28(P)	L	T	P	C		
		Pre-requisite	-	1	0	2	2		
	Course Objective: To enable the students to learn various concepts of engineering graphics								
	CAD tool.								
Course O	Outcomes								
1	Sketch th	ne two-dimensional draw	rings using draw, modify, and ann	otatio	on co	mma	ands		
	in CAD software								
2	Draw the projections and solve the problems in projections of points, lines, planes &								
	solids.					-			
3	Create or	thographic projections a	nd isometric projections and creat	e cor	npos	ite so	lids		

### **SYLLABUS**

#### **Module 1:**

#### **Overview of CAD Software:**

using CAD software.

Computer technologies that impact graphical communication, Demonstrating knowledge of CAD software such as The Menu System, Toolbars, Command window, and Status Bar. Set up the drawing page and the printer, Scale settings, setting up of units and drawing limits, standards for annotations, and 3D Modeling.

#### **Module 2:**

**Introduction to Orthographic Projections**: Projections of points, straight lines, planes and simple solids

#### Module 3:

Development of surfaces of simple solids, isometric views, Conversion of isometric views to orthographic views. And create complex compound solids in CAD

#### List of Exercises

List of E	xercises
1	Creation of simple 2-D geometries
2	Creation of complex 2-D geometries & Engineering Curves –Generic method for
	Conic sections
3	Engineering Curves – Cycloids & Involutes
4	Orthographic Projection of Points
5	Projection of lines in simple positions and inclined to one plane
6	Projection of lines inclined to both planes
7	Projection of planes is simple and inclined to one plane
8	Projection of planes inclined to both planes
9	Projection of solids simple positions
10	Development of simple Solids (Prisms, Pyramids, Cylinder & Cone)
11	Conversion of orthographic views to isometric views
12	Modeling of complex 3D geometries and their conversion to orthographic views

	ETHICS AND HUMAN VALUES								
D24MENICTOO	4	(Common to all	<b>Branches</b> )						
R24MENGT004	Total Contact Hours	28 (L)	L	T	P	C			
	Pre-requisite	-	2	0	0	2			
Course Objecti	ve	•							
The course creat	es awareness regarding th	he need for the dev	velopment of a	holist	ic pers	spective			
in understanding	the nuances of personal,	professional and s	social life. It en	nables	the stu	dent to			
grasp the ethical	principles that govern hu	man existence.							
Course Outcomes									
After completing	this course, the students	will be able to							
1 Identify th	e relevance of the conce	epts of Self -Explo	I Identify the relevance of the concepts of Self -Exploration and Natural Acceptance in						

- day-to-day life to achieve continuous happiness and prosperity. (**BL 3**)
- Discuss the impact of trust and respect as foundational values in human relationships to achieve comprehensive human goals. (BL 3)
- Understand the relevance of ethical theories and their applications in societal living.
- Understand the concept of ethics in engineering practice (BL 3)
- Discuss the purview of ethics in understanding global issues pertaining to different fields. (BL 3)

#### **SYLLABUS**

#### Unit I UNDERSTANDING THE SELF 5 hrs

Characteristics of Universal Human Values; Self-Exploration- Meaning and Process; Basic Human Aspirations – Meaning and Basic Requirements for fulfilment; Concept of Human Existence - Conscious and Material Entities; Difference between the Conscious and the Material Entities of Human Existence.

#### UNDERSTANDING THE FAMILY AND SOCIETY **Unit II** 5 hrs

Understanding the importance of harmony in a family; Exploring value of feelings in relationships; Measures to ensure Harmony in the family. Understanding conflict (meaning, types); Dimensions of Human order for harmony in society - Physical, mental, social and spiritual; Universal values of justice, democracy, respect and gratitude.

#### Unit III **ETHICAL THEORIES**

Professionalism and ethics; Ethical Theories: Golden mean theory, Rights-based theory, Dutybased theory, Utilitarian theory, Kohlberg's Theory. Moral issues; Moral Dilemmas; Types of Inquiries – Normative, Conceptual, factual/descriptive.

#### Unit IV ETHICS AND ENGINEERING

Engineering ethics - Social Experimentation; Safety Responsibility and Rights: Engineers as responsible Experimenters, Concept of Safety and Risk: Engineer's Responsibility for Safety, Risk – Benefit Analysis.

Case Studies: The challenger disaster, The Three Mile Island, Fukushima Nuclear Disaster, Bhopal Gas Tragedy, The Titan submersible disaster.

#### ETHICS AND GLOBAL ISSUES 5 hrs

Ethics and Global Issues: Environmental ethics; computer ethics; Business Ethics; Corporate Social responsibility; Code of ethics.

R24MSCST004	Total Contact Hours	42(L)	L	T	P	C		
	Pre-requisite	C Programming	3	0	0	3		

#### **Course Objective**

To get exposure to the style of object oriented programming over procedure oriented programming that makes modeling complicated solutions more manageable & structuredand explore the same using C++ programming constructs.

#### **Course Outcomes**

- Students will be able to compare the differences between procedure oriented programming and object oriented programming.
- 2 Students will be able to analyze the class object model and apprise constructors , destructors, static variables and methods
- 3 Students will be able to apply the concept of operator and function overloading and also evaluate friend functions and classes
- 4 Students will be able to examine the features of inheritance to enhance code Reusability.
- 5 Students will be able to experiment with template functions and classes and could also identify the exception handling ,vector classes
  - Students will be able to design and develop applications using oop Model confidently and also distinguish between oop technique and Procedural oriented methodology

#### **SYLLABUS**

## Unit I Incremental Changes to C: C++ 8 hr

Deficiencies with Structured Programming in C, Grouping of Data and related functions; Enhancements to built-in data types from C; Identifying a logical group – Abstraction, create a capsule with Data and related functions – Encapsulation; Class – a construct to support Abstraction & Encapsulation, Control Visibility of parts inside capsule – Data Hiding; Macros to avoid duplicate User Defined Data Type definitions, Enhancements to built-in operators from C in C++; Streams, Stream Classes, pre-defined Streams, Input and Output from Standard streams; Manipulators: pre-built & user-defined, Formatted and Unformatted input and output; Concepts of Scope & Extent/life-time, Concepts of static and dynamic memory allocation for member variables;

## Unit II CLASSES, OBJECTS, MEMBER FUNCTIONS & 8 hr VARIABLES

Constructors-Types and Destructors; Static Object creation: static memory allocation, initialization with Constructor, invoking public member functions, Dynamic object creation and destruction; Public and private members of a class and their usage through an object – Protected members; Static member variables, static member functions; This pointer & self-reference, Namespace & inline functions; Class Functions/Variables distinct from Instance Functions/Variables; Const Functions and Const parameters to Functions; Parameter passing mechanisms in C++

#### Unit III OVERLOADING, FRIEND FUNCTIONS AND CLASSES 8 hr

Overloading Definition, Constructor Over-loading, Function Over-loading, drawbacks of functions overloading; Unary Operators Overloading using public member functions; Binary Operators Overloading using public member functions; Copy Constructor, Assignment Operator Overloading for a Class; Friend Functions, Friend Classes; Unary Operators Overloading using Friend Functions; Binary Operators Overloading Using Friend Functions; "<<" overloading using Friend Function

Unit IV	INHERITANCE & POLYMORPHISM	8 hr							
Inheritance & Ty	pes of Inheritance, Type-Substitutability; Multiple Inheritances, Iss	sues with							
Multiple Inheritance; Composition versus Inheritance, Virtual Base Class; Static									
Polymorphism using Inheritance; Functions Overriding; Constructors in inheritance &									
Destructors inher	ritance; Pointers in Inheritance, Virtual Functions; Pure virtual	functions

R24MSCST006		PRINCIPLES OF PROGRAMMING LANGUAGES (CSE,IT,CSIT,AIML,DS,ICB)									
	Total Contact Hours	42 (L)	L	T	P	C					
	Pre-requisite	Basic computer knowledge and	3	0	0	3					
		programming languages like C.									

#### Course Objective

- To understand and describe syntax and semantics of programming languages
- Understand the significance and implementation of programming languages in a compiler or interpreter.
- To implement programs in an Imperative, functional, logical, scripting and object-oriented programming languages.
- Learning principles to design modern programming languages.
- Increase capacity to express programming concepts alternative ways

#### **Course Outcomes**

- 1 Students will be able to analyze syntax and semantic of programming languages and design parsers for the grammars.
- 2 Students will be able to design and implement the concepts of data types, arrays, pointers and control structures in various programming languages.
- 3 Students will be able to create and implement basic concepts of sub-programs in various programming languages.
- 4 Students will be able to design and implement basic concepts of OOPs, Multithreading and Exception handling in various programming languages.
- 5 Students will be able to implement and adapt to Functional Programming Languages and Logic Programming Languages.
- 6 Students will be able to adapt to various programming language principles and develop programs using them.

#### SYLLABUS

### Unit 1 PRELIMINARY CONCEPT, SYNTAX AND SEMANTICS 8 hr

Reasons for studying concepts of programming languages, programming domains; Language evaluation criteria, influences on language design; Language categories, Language design trade-offs; implementation methods, programming environments; General problem of describing syntax; Formal methods of describing syntax; Attribute grammars; Describing the meanings of programs

#### Unit II NAMES, BINDINGS, AND SCOPES & DATA TYPES, 8 hr EXPRESSIONS AND STATEMENTS

Introduction, names, variables, concept of binding, Scope, scope and lifetime; referencing environments, named constants, primitive, character, string types, user defined ordinal types; Array, associative arrays, record, tuple types, list types, union types; Pointer and reference types, type checking, strong typing, type equivalence; Arithmetic expressions, overloaded operators, type conversions, relational and Boolean expressions; short- circuit evaluation, assignment statements, mixed-mode assignment; Control Structures – introduction, selection statements, iterative statements; Unconditional branching guarded commands.

#### Unit III SUBPROGRAMS, IMPLEMENTING SUBPROGRAMS & 8 hr ABSTRACT DATA TYPES

Fundamentals of subprograms, design issues for subprograms, local referencing environments; Parameter passing methods, parameters that are subprograms, calling subprograms indirectly; Overloaded subprograms, generic subprograms, design issues for functions; User defined overloaded operators, closures, co routines, General semantics of

calls and returns; implementing simple subprograms, Implementing subprograms with stack-dynamic local variables; Nested subprograms, blocks, implementing dynamic scoping; The concept of abstraction, introductions to data abstraction, design issues, language examples; Parameterized ADT, encapsulation constructs, naming encapsulations

# Unit IV OBJECT ORIENTED PROGRAMMING, CONCURRENCY 8 hr

Design issues for OOP, OOP in Smalltalk, C++, Java, Ada 95, Ruby; Implementation of Object-Oriented constructs; introduction to subprogram level concurrency; Semaphores, monitors, Message passing, Ada support for concurrency; Java threads; Concurrency in functional languages, statement level concurrency; Exception Handling: Introduction, exception handling in Ada, C++, Java; Introduction to event handling, event handling with Java and C#.

#### Unit V FUNCTIONAL PROGRAMMING LANGUAGES, LOGIC 8 hr PROGRAMMING LANGUAGES

Introduction, mathematical functions, fundamentals of functional programming language; LISP, LISP Functions, LISP Schema; ML, Haskell; support for functional programming in primarily imperative languages, comparison of functional and imperative languages; Brief Introduction to predicate Calculus & proving theorems; An overview of logic programming, the origins of prolog; Basic elements of prolog; Deficiencies of prolog, applications of logic programming.

### LEARNING RESOURCES

LEARNING RE	SOURCES					
TEXT BOOKS	:					
1	Concepts of Programming Languages, Robert. W. Sebesta 10th edition, Pearson Education.					
2	Programming Language Design Concepts, D. A. Watt, Wiley India Edition.					
REFERENCE :	BOOKS:					
1	Programming Languages, A.B. Tucker, R.E. Noonan, TMH. Programming Languages, K. C. Louden and K A Lambert., 3rd edition, Cengage Learning.					
2	Programming Language Concepts, C Ghezzi and M Jazayeri, Wiley India.  Programming Languages 2nd Edition Ravi Sethi Pearson.					
3	Introduction to Programming Languages Arvind Kumar Bansal CRC Press.

DAAMG CCTDOO	COMPUTER ARCHITECTURE (CSE,IT,CSIT,AIML,DS,ICB)						
R24MSCST009	Total Contact Hours	42 (L)	L	T	P	C	
	Pre-requisite	Digital Logic and Design	3	0	0	3	

#### **Course Objectives**

- Students will get exposure to basic structure of a computer, different functional subsystems of the computer and different architectural models of computer design.
- Students will study and analyze the different ways of designing arithmetic logic unit, instruction sets, control units that control the computer, memory subsystems and Input Output subsystems of a computer;
- Students will study and analyze design of computers with parallel processing capabilities and having multi-processors.

#### **Course Outcomes**

- Apply their understanding of computer types and functional units to design efficient systems tailored to specific applications, demonstrating the practical application of foundational concepts in computer architecture.
- Analysis of Register Transfer Language (RTL) and notations, dissect micro-operations to gain an in-depth understanding of digital system operations, Memory subsystems and Input Output subsystems of a computer, fostering the ability to critically evaluate and describe complex digital architectures.
- Evaluate the effectiveness of parity bit error detection and comparing various error detection codes, error detection mechanisms, Synthesis of Micro-operation Completeness and ALU Circuit Designs.
- 4 Create optimized BUS architectures and design memory transfer systems, showcasing their ability to synthesize and create efficient data flow solutions within digital systems.
- Applying arithmetic micro-operations in circuit design and implementing logic micro-operations for specific applications, students will gain hands-on experience in applying advanced computational techniques, enhancing their ability to solve complex problems.
- Design an intricate Arithmetic Logic Unit (ALU) circuit with micro-operation completeness, demonstrating the highest level of creativity and advanced skills in creating a sophisticated solution essential for achieving high-performance computing.

#### **SYLLABUS**

# Unit I BASIC COMPUTER STRUCTURE AND MICRO-OPERATIONS | 8 hr

Computer Types and Functional Units; Stored Program Computer and Basic operational Concepts; Error detection codes – Parity bit error detection, RTL and notations; BUS and memory transfers; Arithmetic micro-operations circuit; Logic Micro-operations, circuit, applications of logical micro-operations; Shift micro-operations and circuit; Micro-operation completeness and combined ALU circuit;

## Unit II COMPUTER INSTRUCTION AND CONTROL UNIT 8 hr

Timing & Control, Special Purpose Registers and sizes; Instruction Cycle, Fetch & Decode; Memory Reference Instructions; Register Reference Instructions, Input-Output Organization; Input-Output Instructions, Interrupt Cycle; Different Organizations of Computer, Stack Organization, Instruction Formats; Addressing Modes; Program Control Instructions and Flags;

#### Unit III COMPUTER ARITHMETIC

Signed binary addition/subtraction with negative numbers in signed magnitude form, Signed binary addition/subtraction with negative numbers in 2's complement form; Binary multiplication with negative numbers in signed magnitude form; Binary multiplication with negative numbers in 2's complement form (Booth's Algorithm); Division with negative numbers in signed magnitude form (restoring & nonrestoring); Floating point representation, IEEE floating point representations; Floating point addition/subtraction with mantissa in signed magnitude form; Floating point division with mantissa in signed magnitude form; Floating point division with mantissa in signed magnitude form;

8 hr

#### Unit IV MEMORY AND I/O ORGANIZATION 8 hr

Memory Hierarchy and criteria for building hierarchy, RAM and ROM, Main Memory; Associative Memory; Cache Memory –Introduction, Locality of Reference, Mapping Techniques; Input / Output Interface, Isolated I/O and memory mapped I/O; Asynchronous data transfer-Strobe Control, Handshaking mode of transfer; Program Controlled I/O, Interrupt Driven I/O; Priority Interrupts, Types of Interrupts, Interrupt – Initial and Final Operations, Cycle; Direct Memory Access;

#### Unit V PIPELINING & MULTIPROCESSORS 8 hr

Parallel processing basics, Flynn's classification; Pipelining, parameters and Performance Measurement; Arithmetic Pipeline, Instruction Pipeline; RISC and RISC Instruction Pipeline; Characteristics of Multiprocessors, Interconnection Structures-Time Shared common bus, Multiport Memory; Interconnection Structures-Crossbar Switch, Multistage switching Network, Hyper Cube System; Cache Coherence and solutions; Interprocessor Arbitration, interprocessor synchronization;

#### **LEARNING RESOURCES:**

R24MSCST010	DATABASE MANAGEMENT SYSTEMS (CSE,IT,CSIT,AIML,DS,ICB)						
	Total Contact Hours	42(L)	L	T	P	C	
	Pre-requisite	-	3	0	0	3	

#### **Course Objective**

Students will get Exposure on basics of designing relational Database without having any redundancy and also gain the knowledge on handling transaction data in concurrent way and recovering from the failures.

#### **Course Outcomes**

1	Students will be able to apply the knowledge of ER Modeling design the			
	database from the client requirements			
2	Students Will be able to analyze the SQL query pattern and classify the query			
	patterns based on the client requirements			
3	Students will be able to Examine the database design and classify the different levels			
	of dependencies using Normal Forms			
4	Students will be able to compare and choose different indexing mechanisms to store			
	data in secondary storage devices as per the requirements.			
5	Students will be able to justify the importance of concurrency and recovery			
	Management			

#### **SYLLABUS**

### Unit I INTRODUCTION TO DATABASE MANAGEMENT SYSTEM, 8 hr ER MODELING

storage and able to solve the user queries

Students will be able to design the complete database without redundant

Need for DBMS, Advantages of DBMS over File Systems; Database applications; Database Users, Different Data Models; 3 Levels of Abstraction in DBMS (External, Conceptual & Physical Schema) and data independence, Database Management System Structure.; Introduction to ER Model, Entity, Entity Set, Attribute – Entity Vs Attribute;

Relationship & Relationship Set – Entity Vs Relationship – Binary Relationship, Ternary Relationship; Introduction to Keys (Candidate Key, Primary Key, Super Key, Unique Key, Not Null Key) – Modeling Key Constraints; Modeling Weak Entities – Mapping concept of Weak Entities to Composite, Primary Key Concept, Referential Integrity Constraint (include cascaded operations of Delete & Update ); Modeling Participation Constraints – Cardinality, Full participation & Partial, Modeling Class Hierarchies – Mapping concept of class Hierarchies to covering constraints, Modeling Aggregation – Ternary Vs Aggregation

#### Unit II RELATIONAL ALGEBRA & RELATIONAL CALCULUS 8 hr

Introduction to Relational Model (Translating Entity Set & Relationship set into Tables ); Introducing Basic operations on Relations: Selection and Projection, Cartesian product, examples; Introducing Basic operations on Relations: Joins, Set Operations and examples; Introducing Basic operations on relations: Division & Renaming and example;

Syntax & Semantics of Tuple Relational Calculus (notations used to represent a query using DRC); Syntax & Semantics of Domain Relational Calculus (notations used to represent a query using DRC); TRC, DRC Query representations using AND, OR, NOT OPERATORS; IMPLIES operator Comparison between TRC and DRC

#### Unit III SQL (STRUCTURED QUERY LANGUAGE) 8 h

Basic Structure of SQL queries(Basic format of select query, DDL,DML commands); Integrity and Referential constraints (Includes syntax for all key constraints, Translating Constraints associated with ER into Tables); Additional Basic Operations(Arithmetic, logical,

relational, pattern matching); Functions(String, Date, Numeric);

Aggregate Functions, Clauses and Set Operations; Join Expressions; Nested Queries, Correlated Queries; Introduction to Views, Destroying/Altering/Updating of views, Handling Null values

#### Unit IV NORMALIZATION 8 hr

**FDs and Decomposition:** Problems caused by redundancy, FD (definition), Armstrong 's axioms; FD identification from relations, Equivalence of two FD sets; Dependency preserving Decomposition, examples; Lossless join, verification, examples;

**Normal Forms:** First normal form, partial dependency, Second normal Form; Transitive dependency, third normal form, Motivation for BCNF; BCNF, Multivalued dependency, Fourth normal form.; Triggers

# Unit V INDEXING, TRANSACTION MANAGEMENT, CONCURRENCY CONTROL & RECOVERY MANAGEMENT

Types of indexes (Clustered index, un clustered index primary index, secondary index), Tree based index versus and Hash based index; ISAM, B+ Tree construction (Insertion and Deletion of nodes); Transaction concept, Transaction states, ACID properties of transaction; Transactions and Schedules, Concurrent executions of transactions (anomalies);

Serializability, Testing for serializability,2PL; Strict 2PL, Deadlocks, timestamp based protocols; Recoverability, Introduction to Log based recovery, check pointing and shadow paging; ARIES algorithm

#### LEARNING RESOURCES

#### **TEXTBOOKS:**

- Data base System Concepts, Silberschatz, Korth, McGraw hill, Sixth Edition. McGrawHill.
  - 2 Data base Management Systems, Raghurama Krishnan, Johannes Gehrke

#### **REFERENCE BOOKS:**

- Fundamentals of Database Systems, Elmasri Navathe Pearson Education.
- An Introduction to Database systems, C.J. Date, A.Kannan, S.Swami Nadhan, Pearson, Eight Edition for UNIT III.

	W	thout recursion.							

5	Week – 5:
	1. Write a python program to find sum of elements in a list recursively
	2. Write a python program to determine number of times a given letter
	occurs in a string using recursion
	3. Write a python program to find if a number is prime or not a prime using
	recursion
	4. Write a python program to find the product of two numbers using recursion.
	5. Write a python program find the power of a number using recursion.
6	Week – 6:
	1. Write a python program to find the largest and smallest number in a list.
	2. Write a python program to merge two lists and sort it.
	3. Write a python program to remove the duplicate items from a list.
	4. Write a python program to check if a string is a palindrome or not.
	5. Write a program to replace all the occurrences of a with x in a string.
7	Week – 7:
	1. Write a program to create a list of tuples with the first element as thenumber
	and the second element as the square of the number.
	2. Write a python program that takes the list of tuples and sorts the list of tuples
	in increasing order by the last element in each tuple.
	3. Write a python program to add a key value pair to a dictionary andupdate
	the dictionary based on the key.
8	Week – 8:
	1. Illustrate in operator and write a python program to count number of
	lowercase characters in a string.
	2. Illustrate the following functions of list 1)len 2)extend 3)sort
	4) append 5)insert 6)remove
	3. Program to pass list as an argument to function illustrate with example
	4. Illustrate the following methods of dictionary with examples
	1) keys() 2) values() 3)items() 4) pop() 5)delete()
	5. Write a Program to do a reverse dictionary lookup in python.
9	Week – 9:
	1. Write a program to generate 20 random numbers in the range of 1 to 100 and
	write to a file
	2. Program to Illustrate seek(), tell() and flush() methods with different
	arguments.
10	3. Program to Illustrate read, readline and readlines methods.
10	Week - 10:
	1. Program to illustrate how to import data from CSV to DataFrame using
	Pandas.
	2. Program to illustrate how to Inspect data in DataFrame using head(),tail ()
	and describe() functions.
11	3. Program to perform sorting and slicing operations.
11	Week – 11:
	1. Program to design an application to display –Hello World.
	<ol> <li>Program to design an application using Label, Entry and Button widgets.</li> <li>Program to design an application using Tkinter Geometry methods pack(),</li> </ol>
	grid(), place() methods.  A Program to design an application using Check Button and Radiobutton widgets.
12	4. Program to design an application using CheckButton and Radiobuttonwidgets.
12	Week – 12:  1 Program to design an application using Many and Manybutton widgets
	1. Program to design an application using Menu and Menubutton widgets.

	,					
	2. Program to design an application using Listbox and Scrollbar widgets.					
	3. Program to design an application using Messagebox and File Dialog					
	widget					
Demonst	<b>Demonstration experiments</b>					
1	Demonstration of Python IDLE to implement solutions.					
2	Demonstration on Colab notebook to read, access and display data from google					
2	drive.

R24MMECT013	LEADERSHIP AND TEAM MANAGEMENT								
	Total Contact Hours	40 (L) + 2 (Introduction) + 6	L	T	P	C			
		(Case Discussion)							
	Pre-requisite	-	3	0	0	3			

#### **Course Objective:**

This course is aimed at helping students:

- To understand what leadership is and the various perspectives put forward by the scientific community
- To understand the *intrinsic challenges* faced by the individual in his/her development of leadership abilities
- To understand the *extrinsic challenges* faced by the individual in discharging his/her role as a leader

#### **Course Outcomes:**

At the end of the course, the student will be able to:

- 1 Assess the current world leadership scenario and critique different approaches taken (BL5)
- Evaluate leadership styles and determine applicability to various societal contexts (BL5)
- Evaluate ability for self-awareness and perception, mental and emotional ability, courage and morality and followership (**BL5**)
- Evaluate ability to motivate and empower others, communicate better, lead teams, handle diversity, influence others and provide direction (**BL5**)
- 5 Evaluate organisational ecosystem and develop a leadership style to meet current challenges (**BL6**)

#### **SYLLABUS**

#### Unit I INTRODUCTION

8 hr

Need for leadership, Goal of an Organisation- Forces of Change- New Realities and Learning Organisations- Prime Task of Leadership- Management and Leadership- Great Man Theory and Leadership Evolution- Leader Fatal Flaws- Systemic Leadership

#### Unit II PERSPECTIVES ON LEADERSHIP

8 hr

Trait Theory-Behaviour Approaches: Autocratic v/s Democratic, Ohio State Studies - University of Michigan Studies, Leadership Grid- Individualised Leadership-Contingency Approach: Hersey Blanchard Theory-Fiedler's Contingency Model-Path-Goal Theory-Vroom-Jago Model

#### Unit III PERSONAL SIDE OF LEADERSHIP

8 hr

Personality and Leadership (Values/Attitudes, Social Perception, Cognitive Difference)-Mental Models, Developing Leader's Mind- Emotional Intelligence- Leading with Love Versus Leading With Fear- Moral Leadership- Leading with Courage-Art of Followership-Strategies for Managing Up

#### Unit IV LEADERSHIP AND RELATIONSHIP

8 hr

Leadership and Motivation, Theories of Motivation- Empowering People to Meet Higher Needs-Leadership and Communication, Channels of Communication- Leading Teams-Handling Diversity- Inclusive Leadership-Influential Leadership-Hard and Soft Power, Increasing Power

#### Unit V LEADER AS A SOCIAL ARCHITECT

8 hr

Vision and Strategic Leadership-Themes of Vision, Mission-Strategic Direction-Organisational Culture- Competing Values Approach-Value-Based Leadership-Leading Change: Appreciative Inquiry- Implementing Change

R24MMECT020	PROI	PRODUCT LIFECYCLE MANAGEMENT								
		40 (L) + 2 (Introduction) + 6 (Case Discussion)	L	T	P	С				
	Pre-requisite	-	3	0	0	3				
0 011										

#### **Course Objective:**

This course is aimed at helping students:

- To understand the philosophy and methodology of product design
- To understand the concept of lifecycle and its management
- To build an insight into the real world and the challenges related to product data management

#### **Course Outcomes:**

At the end of the course, the student will be able to:

- 1 Verify the efficacy of a good engineering design (**BL 5**)
- 2 | Create a suitable development process for an engineering product (**BL 6**)
- 3 Develop a PLM implementation strategy for a product company (**BL 6**)
- 4 Assess a physical product in terms of product data management requirements (BL 5)
- 5 Recommend suitable PLM process requirements for a product (**BL 5**)

#### **SYLLABUS**

#### Unit I ENGINEERING DESIGN 8 hr

4 C's of Engineering Design; Importance of the Engineering Design Process and Types of Design; Modelling Design Thought; Design as a Problem-solving Methodology; Considerations of a Good Design; The Design Process; Codes/Standards and Review; Societal Considerations in Engineering Design.

#### Unit II PRODUCT DEVELOPMENT 8 hr

The Product Development Process; Factors for Success, Static/Dynamic Products, Variations on the Generic Process; Product and Process Cycles; Organisation for Product Development; Markets and Marketing; Identifying Customer's Needs; Kano Model, Quality Function Deployment; Design Specification and Product Architecture.

#### Unit III PRODUCT LIFECYCLE MANAGEMENT 8 hr

Challenges and Emergence of PLM, Definition of PLM; PLM Model, Characteristics of PLM; Environment Driving PLM; PLM Elements; Developing PLM Strategy; Implementing PLM Strategy; PLM Readiness Assessment; Capability Maturity Model.

#### Unit IV PRODUCT IN PLM 8 hr

Collaborative Product Development: Part 1; Collaborative Product Development: Part 2; Product Structure and Specifications; Bill of Material; Product Range, Instance, Identifier; Product Data and Metadata, Product Data Models; Types of Product Data in PLM; Product Data Issues

#### Unit V PROCESS IN PLM 8 hr

Overall Business Process Architecture, Managing BoM; Engineering Change Process; Workflow; Process Mapping and Modelling; Change Management; Variant and Version Management; Configuration Management; PLM Integration with Other Applications.

	OPERATING SYSTEMS							
R24MSCST011	Total Contact Hours	42 (L)	L	T	P	С		
	Pre-requisite	-	3	0	0	3		
	•							

#### **Course Objective**

Students will gain a comprehensive understanding of operating systems, covering topics such as system architecture, functionalities, structures, processes, file systems, storage management, and advanced concepts like inter-process communication, multithreading, disk scheduling, and RAID, enabling them to grasp the fundamental principles and practical aspects of managing computer systems effectively.

#### **Course Outcomes**

operating systems	1	Students will be able to analyze the diverse structures and functionalities of
operating systems.		operating systems.

- 2 Students will be able to design and make use of efficient process management strategies, employing system calls and various threading models to improve overall system responsiveness.
- Students will be able to analyze the system's performance and effectiveness by comparing different strategies for deadlock resolution and memory management.
- Students will be able to analyze the performance of virtual memory management techniques, including TLB, different page table structures, and page replacement algorithms. Examine system behavior to identify and understand the causes of thrashing and evaluate the effectiveness of various file management methods and directory structures.
- Students will be able to analyze the effectiveness of various file system structures and management techniques. Evaluate the efficiency of free space management techniques and disk scheduling algorithms. Examine RAID levels to assess their impact on disk and swap space management.
- Students will be able to adapt to build basic internals of operating system framework that integrates diverse OS concepts (process management strategies, efficient file system structures, and virtual memory management techniques), choose different approaches for inter-process communication to enhance system responsiveness and collaboration, and discuss various solutions for ensuring improved performance and reliability in storage systems.

#### **SYLLABUS**

### Unit I INTRODUCTION TO OS AND CONCEPTS OF PROCESS 8 hr AND THREADING

What Operating Systems do? Computer System architecture; OS Functionalities: Process Management, Memory Management, Storage Management, Protection and Security; Computing Environment: Traditional Computing, Client Server computing, Peer to Peer computing, web based computing, OS Services; System calls, Types of System calls; Operating System Structure: Simple, Layered, Microkernels, Modules; Introduction to Processes: Process, Process States, Process Control Block. Threads.; Operations On Processes: Process Creation, Process Termination (fork(),exec(),exit() system calls); Inter-Process communication: Shared memory, Message Passing;

# Unit IIPROCESS SCHEDULING AND SYNCHRONIZATION8 hrMultithreadingModels: Overview, Benefits, Many to One, One to One, Many toMany. Process Scheduling: Scheduling queues, Schedulers, Context switch;

Process Scheduling: Basic Concepts, CPU Scheduler, Preemptive Scheduling,

Dispatcher, Scheduling Criteria; Scheduling Algorithms (Non-pre-emptive): FCFS, SJF; Scheduling Algorithms II(pre-emptive): Priority Scheduling, Round Robin; Multilevel Queue, Multilevel Queue feedback, Process Synchronization: Introduction to process synchronization. Producer Consumer Problem; Critical Section Problem, Peterson's Solution, Synchronization Hardware; Semaphore, Classical problems of synchronization: Bounded-buffer Problem, Readers Writers Problem; Dining Philosophers Problem, Monitors: Introduction, Usage;

#### Unit III DEADLOCKS AND MEMORY MANAGEMENT

Deadlocks: Introduction, System Model, Deadlock Characterization; Methods for Handling Deadlocks Deadlock Prevention; Deadlock Avoidance (Part -1) Safe state, resource allocation graph algorithm; Deadlock Avoidance (Part -2) Banker's algorithm, Deadlock Detection single instance of each resource type; Deadlock Detection several instances of resource type and Recovery from Deadlocks;

Memory Management, Address Binding, Logical vs Physical Address space; Swapping, Contiguous Memory; Paging (Basic Method);

8 hr

# Unit IV PAGING TECHNIQUES, PAGE REPLACEMENT AND ACCESSING FILES TECHNIQUES

Hardware, TLB, Protection, Shared Pages,; Structure of the Page table, hierarchy, hashed,; Inverted page table, Segmentation; Virtual memory management, Demand paging; Page Replacement Algorithms: FIFO, Optimal page replacement; LRU Page replacement, Thrashing: causes of thrashing,; File concept, File Attributes, File operations, File types, File Structure; Access methods: Sequential Access, Direct Access, Directory Structure: Single level directory, Two level directory;

# Unit V FILE ORGANIZATION AND DISK SCHEDULING TECHNIQUES 8 hr

Tree structured directories, Acyclic graph directories, File System Mounting File Sharing; File Protection: types of access, Access control, File allocation methods: Contiguous allocation,; File allocation methods: Linked allocation, Indexed allocation, Free space management: Bit vector, Linked list, Grouping,; Overview of Mass Storage Structure: Magnetic disks, Magnetic Tapes, Disk Structure; Disk Scheduling: FCFS,SSTF,SCAN,; CSCAN,LOOK,CLOOK; Disk Management, Swap Space Management; Raid Structure: Levels: 0-6, RAID levels 0+1;

#### **Course Objective**

To teach students the basic programming constructs of python language to develop desktop and Graphical user applications

#### **Course Outcomes**

- Students will be able to apply the basic building blocks of python language to develop solutions.
- 2 Students will be able to distinguish between various conditional control statements and using functions simplify the problem using functions.
- 3 Students will be able to illustrate the non-scalar data types with suitable examples.
- 4 | Students will be able to examine file operations and interpret data using pandas library.
- 5 Students will be able to construct the various widgets to implement Graphical User applications.
- Students will be able to design and develop End-to-End applications using Python Programming constructs and GUI module (tkinter module).

#### **SYLLABUS**

# Unit I BASICS – DATA TYPES, OPERATORS, BUILT-IN MODULES 8 hr

Data Types, Escape Sequences, Variables and Basic Input/Output; Assignment Statements, Operators; Arithmetic Expressions, Operator precedence, Type Casting, Program Comments and Docstrings; Program Format and Structure, REPL, IDLE, Running a Script from a Terminal Command Prompt;

Built-In Functions and Modules; NumPy – Functions on 1D arrays; Functions on 2D arrays; Math Module and Pandas Module (DataFrame Creation); User Defined modules creation and

importing a user defined module;

# Unit II DECISION-MAKING STATEMENTS, LOOPS AND USER-DEFINED FUNCTIONS 8 hr

Conditional Statements; While loop, for loop; range () function, nested loops; While-else, Forelse, break, continue, pass, examples;

Functions: Syntax and basics of function and usage; Passing Parameters, arguments in a function – Default, keyword, fixed and Variable - length arguments; local and global scope of variable; return statement, recursive function;

#### Unit III STRINGS, LISTS, TUPLES AND DICTIONARIES 8 hr

Strings- A String is a sequence, Strings are immutable, String slice, String methods; Membership and Identity operators, String search; List- Lists are mutable, List operations; Map filter and reduce, deleting elements, Lists and Strings;

Tuples- Tuples are immutable, Variable - length argument tuples; Tuple as return values, Comparison of Lists and tuples; Dictionaries – Dictionary Creation, Looping and dictionaries; Dictionary as a collection of counters, Reverse Lookup;

Unit IV FILES 8 hr

Introduction to Files, modes, types of files; File handling functions: open(), close(), read(), readline(), readline(); write(), writeline(), append(); seek(), tell(), flush(); file copy using shutil (), delete a file (os.remove ());

Importing data from CSV to DataFrame (Pandas); Inspecting data in DataFrame (head (), tail ()), Statistical summary (describe ()); Sorting and slicing records and filtering data; Create a DataFrame by passing Dict of Series (ColumnSelection, Addition, Deletion), Triggers;

Unit V TKINTER GUI, EVENT DRIVEN PROGRAMMING, 8 hr								
WIDGETS								
The Behavior of Terminal-Based Programs and GUI-Based Programs, Label, Entry and Button								
widget; Tkinter Geometry methods (pack(), grid(), place()); Event-Driven Programming,								
Command Buttons and Responding to Events; CheckButton and Radiobutton widgets;								
Menu and Menu button widgets; Listbox and Scrollbar widgets; Messagebox and Toplevel								
widget; File Dialog widget;

	DATABA	SE MANAGEMENT SYST	EMS			
R24MSCST010	Total Contact Hours	42(L)	L	T	P	C
	Pre-requisite	-	3	0	0	3

#### **Course Objective**

Students will get Exposure on basics of designing relational Database without having any redundancy and also gain the knowledge on handling transaction data in concurrent way and recovering from the failures.

#### **Course Outcomes**

After completing this course, the students will be able to

storage and able to solve the user queries

Students will be able to apply the knowledge of ER Modeling design the database from the client requirements Students Will be able to analyze the SQL query pattern and classify the query 2 patterns based on the client requirements 3 Students will be able to Examine the database design and classify the different levels of dependencies using Normal Forms Students will be able to compare and choose different indexing mechanisms to 4 store data in secondary storage devices as per the requirements. Students will be able to justify the importance of concurrency and recovery 5 Management Students will be able to design the complete database without redundant 6

#### **SYLLABUS**

# Unit I INTRODUCTION TO DATABASE MANAGEMENT SYSTEM, ER | 8 hr | MODELING

Need for DBMS, Advantages of DBMS over File Systems, Database applications; Database Users, Different Data Models; 3 Levels of Abstraction in DBMS (External, Conceptual & Physical Schema) and data independence, Database Management System Structure; Introduction to ER Model, Entity, Entity Set, Attribute – Entity Vs Attribute;

Relationship & Relationship Set – Entity Vs Relationship – Binary Relationship, Ternary Relationship; Introduction to Keys (Candidate Key, Primary Key, Super Key, Unique Key, Not Null Key) – Modeling Key Constraints; Modeling Weak Entities – Mapping concept of Weak Entities to Composite, Primary Key Concept, Referential Integrity Constraint (include cascaded operations of Delete & Update ); Modeling Participation Constraints – Cardinality, Full participation & Partial, Modeling Class Hierarchies – Mapping concept of class Hierarchies to covering constraints, Modeling Aggregation – Ternary Vs Aggregation

#### Unit II RELATIONAL ALGEBRA & RELATIONAL CALCULUS 8 hr

Introduction to Relational Model (Translating Entity Set & Relationship set into Tables ); Introducing Basic operations on Relations: Selection and Projection, Cartesian product, examples; Introducing Basic operations on Relations: Joins, Set Operations and examples; Introducing Basic operations on relations: Division & Renaming and example;

Syntax & Semantics of Tuple Relational Calculus (notations used to represent a query using DRC); Syntax & Semantics of Domain Relational Calculus (notations used to represent a query using DRC); TRC, DRC Query representations using AND, OR, NOT OPERATORS; IMPLIES operator Comparison between TRC and DRC

### Unit III SQL (STRUCTURED QUERY LANGUAGE) 8 hr

Basic Structure of SQL queries(Basic format of select query, DDL,DML commands); Integrity and Referential constraints (Includes syntax for all key constraints, Translating Constraints associated with ER into Tables); Additional Basic Operations(Arithmetic,

logical, relational, pattern matching); Functions(String, Date, Numeric);

Aggregate Functions, Clauses and Set Operations; Join Expressions; Nested Queries, Correlated Queries; Introduction to Views, Destroying/Altering/Updating of views, Handling Null values

#### Unit IV NORMALIZATION 8 hr

Problems caused by redundancy, FD (definition), Armstrong 's axioms; FD identification from relations, Equivalence of two FD sets; Dependency preserving Decomposition, examples; Lossless join, verification, examples;

First normal form, partial dependency, Second normal Form; Transitive dependency, third normal form, Motivation for BCNF; BCNF, Multivalued dependency, Fourth normal form.; Triggers

# Unit V INDEXING, TRANSACTION MANAGEMENT, 8 hr CONCURRENCY CONTROL & RECOVERY MANAGEMENT

Types of indexes (Clustered index, un clustered index primary index, secondary index), Tree based index versus and Hash based index; ISAM, B+ Tree construction (Insertion and Deletion of nodes); Transaction concept, Transaction states, ACID properties of transaction; Transactions and Schedules, Concurrent executions of transactions (anomalies);

Serializability, Testing for serializability,2PL; Strict 2PL, Deadlocks, timestamp based protocols; Recoverability, Introduction to Log based recovery, check pointing and shadow paging; ARIES algorithm

#### LEARNING RESOURCES

#### **TEXTBOOKS:**

- Data base System Concepts, Silberschatz, Korth, McGraw hill, Sixth Edition. McGrawHill.
  - Data base Management Systems, Raghurama Krishnan, Johannes Gehrke

#### **REFERENCE BOOKS:**

- 1 Fundamentals of Database Systems, Elmasri Navathe Pearson Education.
- An Introduction to Database systems, C.J. Date, A.Kannan, S.Swami Nadhan, Pearson, Eight Edition for UNIT III.

			DATA STRUCTURES LAB				
R24MSCSL003		Total Contact Hours	42 (P)	L	T	P	С
		Pre-requisite	Basic Programming	0	0	3	2
Course	Course Objective						
To get h	To get hands-on exposure to linear and non-linear data structures and to identify and apply the						
suitable	suitable data structures for the given real-world problem.						
Course	Outcome	es					
1		-	ent recursive algorithms and will be				
		he role of linear data structures in organizing and accessing data efficiently using					
		g and sorting techniques					
2			ent, and apply linked lists for dyr	nami	c da	ita sto	orage,
2		rating understanding of	•		•	.1	41
3			programs using stacks to handle re	curs	ive a	aigori	tnms,
4		program states, and solv	eue-based algorithms for efficient t	ack	ccho	dulin	a and
			s and distinguish between linear q				
		and apply them appropri		lucu	Co a	iiu Ci	Culai
5			ovel solutions to small scale progra	amn	ning	chall	enges
			s stacks, queues, trees, graphs.		8		8
6	Student will be able to recognize scenarios where hashing is advantageous, and design					lesign	
	hash-based solutions for specific problems.						
LIST O	F EXPE	RIMENTS					
1	WEEK 1(SEARCH TECHNIQUES)						
	• Write a C Program to search an element in the given list using Linear Search						
	Technique. (using recursive and non-recursive functions)						
	Write a C Program to search an element in the given sorted list using Binary Search						
		Technique. (using recursive and non-recursive functions)					
2		2(SORTING TECHNI	<del>-</del>	1! -4	- C		
		e a C Program using nding order using Bubb	recursive function to sort a given	IISU	. 01	mieg	ers in
			recursive function to sort a given	lict	of	intag	arc in
		nding order using Quick		1150	. OI	mieg	518 III
		0 0 1	recursive function to sort a given	list	of	integ	ers in
		nding order using Merg		1150	. 01	mics	215 111
3	WEEK 3(LINKED LIST)						
			e a Single linked list and perform	basi	c op	eratio	ns on
		le Linked List.			1		
4	WEEK 4 (OTHER VARIANTS OF LINKED LIST)						
	• Write a C Program to create a Circular linked list and perform basic operations.						
	• Writ	e a C Program to create	a Double linked list and perform b	asic	opei	ration	S.
5	WEEK 5 (STACKS & APPLICATIONS)						
	• Writ	e a C Program to imple	ment Stack operations using arrays.				
		•	ment Stack operations using linked				
			ment Infix to postfix conversion usi		stack	S.	
			ate the Postfix Expression using sta	cks.			
6		6 (QUEUES)					
			ment Queue operations using arrays				
	• Writ	e a C Program to imple	ment Queue operations using linked	d list	_

Search Tree.  WEEK 9 (GRAPHS & TRAVERSAL TECHNIQUES)  Write a C Program to create a Graph (using Adjacency Matrix or Adjacency List).  Write a C Program to implement Graph Traversals -Breadth First Search and Depth First Search.  WEEK 10 (GRAPH APPLICATIONS)  Write a C Program to implement Prim's & Kruskal's Algorithm for finding Minimum Cost Spanning Tree.  Write a C Program to implement Single Source Shortest Path -Dijkstra's Algorithm.  WEEK 11 (HEAPS)  Write a C Program to implement Binary Heap (Min Heap or Max Heap).  WEEK 12 (HASHING)  Write a C Program to implement Collision Resolution Techniques using Linear probing (Open Addressing) Technique using Division method as hash function.  LEARNING RESOURCES  TEXT BOOKS:  Mark Allen Weiss, Data Structures and algorithm analysis in C, Pearson, 2nd Edition.  Ellis Horowitz, Sartaj Sahni, Susan Anderson-Freed, Fundamentals of data structures in C, Silicon Press, 2008.  Richard F, Gilberg, Forouzan, Cengage, Data Structures, 2/e. R24MSCSL005		PYTHON PROGRAMMING LAB							
		Total Contact Hours	42(P)	L	T	P	С		
		Pre-requisite	-	0	0	3	2		
Course Objective		1							
	-		ming constructs which are use	d to	leve	lop	both		
		pplications using pythor	•			10P	00111		
Course Or		**	i programmig.						
1	ı		the basic building blocks of ny	thon 1	angi	1906	like		
1		Students will be able to apply the basic building blocks of python language like							
2		les, operators and modules.							
3		nts will be able to apply conditional control statements and functions.				icina			
3		ents will be able to apply various file operations and analyze the data us					ising		
pandas library.					and	dor	volon		
4 Students will be able to choose the various widgets to design an Graphical User Interface (GUI) applications.				anu	aev	elop			
T'4 CE			) applications.						
List of Exp									
1	Week								
		1.0	llustrate data types (int, char, floa		_				
			to perform the following express	ions u	sıng	oper	ator		
		precedence							
	1	(1) 5+3*2							
	`	(2) 2*3**2							
	`	(3) 2**3**2							
	1	(4) (2**3)**2							
		17 1 0 71							
		4. Write a python program to illustrate pi, sqrt, cos, sin functions of math							
		nodule							
2	Week								
		Write a program to calcu	•						
			to calculate compound interest						
			to print ASCII value of a characte	er					
			to find the area of a circle						
			the given number is prime or no	t.					
		10	to find the area of a triangle						
	7. V	Write a program to perfo	rm string concatenation						
3	Week – 3:								
	Illustra	ate Numpy operations.							
	1.	Program to read, proce	ss and display data						
	2.	Program to access data	using various numpy functions of	n 1D	arra	ys.			
	3.	Illustrate other built-In	functions of Numpy on 2D array	s.					
4	Week – 4:								
	1.	Write a python program	to display minimum and maximu	ım am	ong	thre	e		
		numbers.							
	2.	Write a python program	n to count the number of even a	and oc	ld n	umb	ers		
		from a series of numbers							
	3.	Write a python program	to display Fibonacci series using	iterat	ion a	and			
		recursion.							
	1		0. 1 1 0 11 0	1	1		1		
	4.	Write a python progran	n to find the factorial of a num	iber w	11th	an	a		

5	Week – 5:
3	1. Write a python program to find sum of elements in a list recursively
	2. Write a python program to determine number of times a given letter
	occurs in a string using recursion
	3. Write a python program to find if a number is prime or not a prime using
	recursion
	4. Write a python program to find the product of two numbers using
	recursion.
	5. Write a python program find the power of a number using recursion.
6	Week – 6:
	1. Write a python program to find the largest and smallest number in a list.
	2. Write a python program to merge two lists and sort it.
	3. Write a python program to remove the duplicate items from a list.
	4. Write a python program to check if a string is a palindrome or not.
	5. Write a program to replace all the occurrences of a with x in a string.
7	Week – 7:
,	1. Write a program to create a list of tuples with the first element as thenumber
	and the second element as the square of the number.
	2. Write a python program that takes the list of tuples and sorts the list of tuples
	in increasing order by the last element in each tuple.
	3. Write a python program to add a key value pair to a dictionary and
	update the dictionary based on the key.
8	Week – 8:
O	1. Illustrate in operator and write a python program to count number of
	lowercase characters in a string.
	2. Illustrate the following functions of list 1)len 2)extend 3)sort
	4) append 5)insert 6)remove
	3. Program to pass list as an argument to function illustrate with example
	4. Illustrate the following methods of dictionary with examples
	1) keys() 2) values() 3) items() 4) pop() 5) delete()
	5. Write a Program to do a reverse dictionary lookup in python.
9	Week – 9:
	1. Write a program to generate 20 random numbers in the range of 1 to 100 and
	write to a file
	2. Program to Illustrate seek(), tell() and flush() methods with different
	arguments.
	3. Program to Illustrate read, readline and readlines methods.
10	Week – 10:
	1. Program to illustrate how to import data from CSV to DataFrame using
	Pandas.
	2. Program to illustrate how to Inspect data in DataFrame using head(),tail ()
	and describe() functions.
	3. Program to perform sorting and slicing operations.
11	Week – 11:
	1. Program to design an application to display –Hello World.
	2. Program to design an application using Label, Entry and Button widgets.
	3. Program to design an application using Tkinter Geometry methods pack(),
	grid(), place() methods.
	4. Program to design an application using CheckButton and Radiobutton
	widgets.

12	Week – 12:			
	1. Program to design an application using Menu and Menubutton widgets.			
	2. Program to design an application using Listbox and Scrollbar widgets.			
	3. Program to design an application using Messagebox and File Dialog			
	widget			
Demonstr	ation experiments			
1	Demonstration of Python IDLE to implement solutions.			
2	Demonstration on Colab notebook to read, access and display data from google			
2	drive.			
3	Demonstration on jupyter notebook to link and access data.
